# Where do we find stem cells?

They were in my umbilical cord so I must no longer have them.

I had them as an embryo and also now as an adult.

Just in the embryo I think.

I thought stem cells were artificial so no-one has them naturally.

# Who has stem cells ?

I thought only humans had them.

Wouldn't it be all living things ?

I thought they were a new thing, so dinosaurs wouldn't have had them.

What about bacteria? They are only one cell.
